

BASS & LEAD SPEAKER SYSTEMS

Selecting cabinets for your guitar amplification system can be as important to your final sound as selecting the right amplifier and instrument. And sound alone is not the only consideration.

Portability, flexibility and overall construction quality are important elements and depending on your playing requirements may be the key factors in your purchasing decision. Take your time to make a selection and keep in mind your own personal requirements for a system.

GK QUALITY

All Gallien-Krueger Cabinets are constructed with premium quality materials to insure a long life of rugged use. Each model is designed to give you maximum sound from the smallest and lightest enclosure possible. This is achieved by special structural bracing and precise porting. These unique cabinets are built around the finest speakers available to give you powerful, portable sound reinforcement.

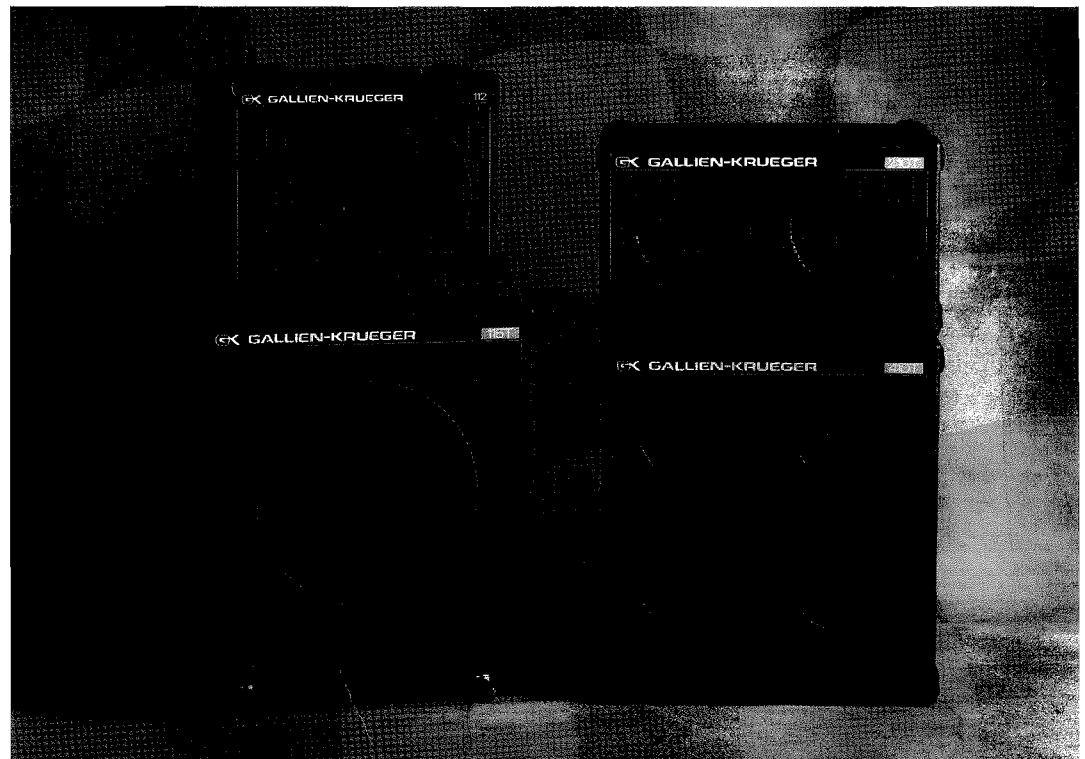

WOOD CABINETS

Our Wood Cabinets are built using 100% solid core 9-ply alder plywood and covered with durable Tolex™ vinyl that resists nicks and tears. Grills are made from perforated steel with a baked finish, providing ample protection for speakers and baffles. Rugged interlocking corners and steel/vinyl, or recessed steel handles give you added traveling protection and make setup easy. Larger cabinets are equipped to accept optional removable castors.

The 112S, 212S, 212HS, and 412S Lead Cabinets have a partial open-back design to enhance the cabinet's tonal character. When protected in a padded road bag, your Micro Lead head will fit inside the cabinet for traveling ease and convient storage.

L-SERIES CABINETS

Portable, powerful and rack mountable! The L-Series Cabinets are built entirely of aluminum and steel, yet have a rich warmth characteristic of wood. Each cabinet has been carefully tuned to compliment the speakers used. Anti-resonance internal bracing as well as unique groove reinforcements on the top and bottom panels were incorporated to control vibration and strengthen

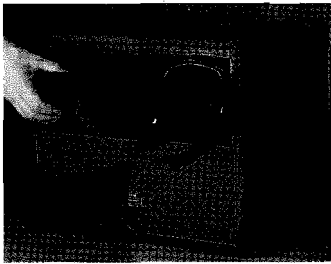

the box. A custom perforated grill provides maximum speaker protection while allowing maximum audio output.

The L-Series Cabinets can be carried with one hand by a top

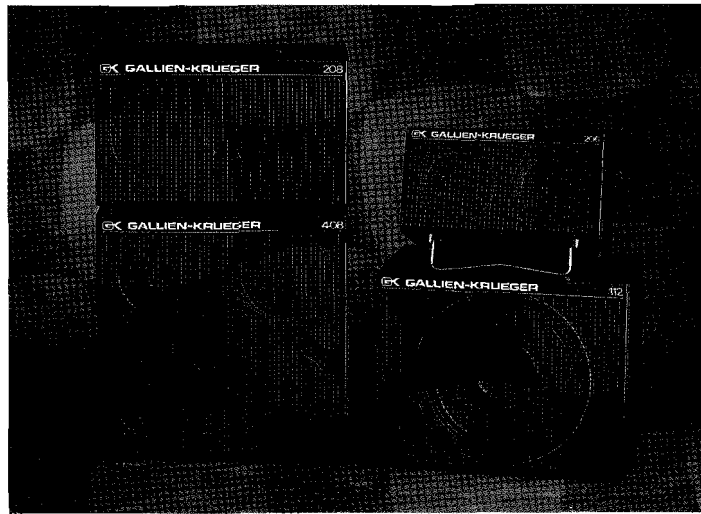

handle. And the front can be tilted-up for use as a floor monitor with the included bottom bracket. They offer a true alternative to the back breaking ritual of typical setup and teardown.

*Shown above are the all-new
Gallien-Krueger Wood
Cabinets for Bass and Lead.*

The 112S, 212S, 212HS, and 412S are designed with a partial open back. It is easy to slip your Micro Lead head (in a protective road bag) into the cabinet for moving and storage.

The GK Rack Box 4 fits blends perfectly with all GK cabinets for a total system.

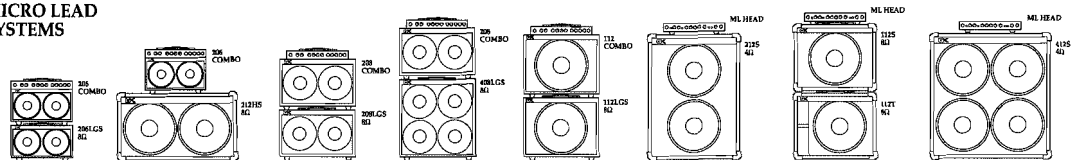

SUGGESTED GALLIEN-KRUEGER SYSTEMS

Cabinets can be as important to your final sound as your guitar or electronics. Choosing the right system should be considered carefully and will take a little experimentation.

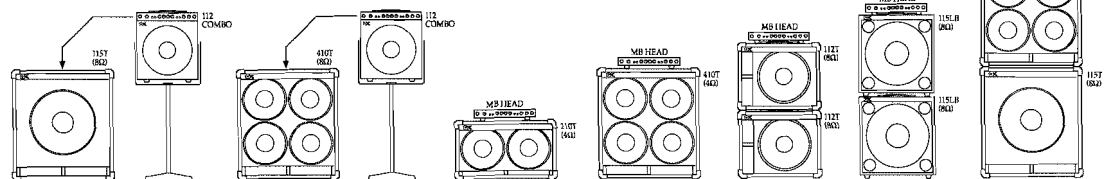

There are a variety of ways to use Gallien-Krueger heads and combos in conjunction with GK cabinets. Here are our favorite systems. They were each designed to maximize the power and flexibility of Gallien-Krueger electronics.

These are only suggestions and you may want to try other combinations to meet your exact needs.
