

THE B.T. MODELS

THE B.T. STANDARD features a three-piece dovetail neck/body joint. The body has three pieces of maple with veneer or hardwood separating the pieces giving the look of a neck through body instrument. In the rear the dovetail neck joint is flawlessly displayed.

THE B.T. CUSTOM features a three-piece neck through body design. The body is of four separate pieces of bird's eye or curly maple from the same board, laminated with rosewood veneer center with the body halves joined to the neck. The neck is of similar design to the B.T. Standard.

THE B.T. CUSTOM 'G' features our famous Graphite Carbon-Fiber inlaid 3 or 5 piece neck design. The graphite is inlaid on both sides of the truss rod under the fingerboard. This gives the look and feel of wood plus the strength and tone of graphite. All other features are the same as the B.T. Custom.

B.T. Electronic Features:

- Active pre-amp with by-pass control
- 15 db cut and boost bass control
