

T-40™

The sophisticated, yet simple, circuitry of the T-40™ is much the same as our legendary T-60™, but has been tailored for the lower fundamentals and harmonic structures of the bass guitar. The T-40™ utilizes two high output dual coil pickups and features our patented dual/single coil circuitry. Further tonalities can be achieved by the "phase" switch allowing out-of-phase sounds to be achieved enhancing many of today's bass guitars techniques and styles. The T-40™ volume controls operate *independently* allowing total control over the volume "blends" and dual/single coil functions.

T-20™

The Peavey T-20™ is a full 34" scale bass guitar featuring an advanced high output and full range single coil pickup. The pickup has been "*harmonically*" placed at a precise point on the body for enhancement of the instrument's fundamentals and harmonics structures. The T-20™ also features our exclusive combination of pickup mounting ring and thumb rest (patent applied for) which maximizes right hand comfort and playing ease. The bridge features four 1/2" steel "barrel-type" string saddles for accurate intonation and compensation characteristics.

T-45™

For the bassist who is seeking a highly versatile single pickup instrument, Peavey proudly introduces the T-45™ guitar. The T-45's™ "*harmonically*" placed high output, dual coil pickup offers the bassist all the "punch" and "guts" of humbucking type pickups plus the "tight", well defined clarity of instruments featuring single coil pickups. These tonalities are accomplished through our patented dual/single coil circuitry. Further tonalities can be achieved with our exclusive mid-cut control, which "*passively*" allows extra mid frequency reduction for added enhancement of modern playing techniques and styles such as "neck slapping" and "string popping".

Foundation™

The Foundation™ is the latest addition to the Peavey bass guitar line. The Foundation™ is a full 34" scale instrument with a totally new neck design for unparalleled comfort and action. Two single coil pickups are harmonically placed producing full range response and exceptional output along with our unique hum rejection circuitry. The Foundation™ also features independent volume controls for each pickup, a master tone control, high quality tuning machines, and a heavy-duty bridge with fully adjustable saddles. All controls are rear mounted, adding to the overall beauty of the instrument.
