The only luthier to ever build an instrument(s) worthy of being played long term by Anthony Jackson is Vincent Fodera. Vincent who is a legend in his own right and for good reason has been the engine of change in the custom bass business and like Anthony an uncompromising innovator. A great deal of these innovations never would have seen the light of day if not for the association of Fodera and Jackson. This featured instrument is the offspring of two of the most respected men in their field and proof positive of what can be accomplished when a luthier listens to his client. Through this partnership if you will the state of the instrument has been elevated from a performance and construction stand point. For many of you this will be the first time seeing one of these incredible instruments in such detail so please feel free to inquire further about this model and its history.

AJ Presentation #9 features: 36" scale, 5A solid hand carved Chestnut top, Alder body, Pink ivory fingerboard, Chestnut heel block, 5 piece neck with purpleheart stringers, Custom dual coil, pickup wired to the jack, Semi hollow chambers, 28 vintage frets
