

OCTABVRE is a monophonic analog octaver that generates harmonically rich sub-octave tones. It was designed for my friend Tim Lefebvre, and it rhymes with his last name. Even after I tell people this, they can't pronounce it. I used to go see Tim play with Wayne Krantz at the 55 Bar in New York, and he would constantly bend over to adjust his OC-2, so I added a secondary footswitch which cuts the dry signal - no bending over required.

TRACKING is something that must be understood when dealing with analog octavers. They only track one note at a time (monophonic), and they demand you play cleanly and hit each note with intention to track properly. Sometimes they glitch out if you hold a note too long, or if you play one of the bad notes (you know the ones).

An octaver needs to lock onto the note fundamental in order to work. The more harmonics present, the harder it is for the circuit to lock on. This is why octavers have trouble on open strings and around the dead spot in your neck - too many overtones and not enough fundamental.

CLEAN adjusts the volume of your clean signal. Unity gain is around 12 o'clock.

OCTAVE adjusts the volume of the octave down signal. Unity gain is around 12 o'clock.

TONE adjusts the tone of the octave down signal.

TIM changes the tone of the octave down signal in mysterious ways.

SUB mode cuts the dry signal so that you only hear the sub signal. This mode has its own volume control via the SUB trimpot.

POWER 9V DC // 30mA // 2.1mm center-negative connector.

INPUT IMPEDANCE very high.

OUTPUT IMPEDANCE very low.

BYPASS transparent active bypass system with proprietary electronic switching. No clicks, no pops, will never break.

FOOTPRINT 64 mm x 118 mm

TOOLS #2 Phillips driver, 1/16" hex driver, 10mm // 14mm // 15mm deep sockets

WARRANTY OCTABVRE is guaranteed to the original purchaser for a period of one year.

OCTABVRE works best early in your signal chain. For best tracking, keep your instrument volume all the way up, use your neck pickup and play nice fat sounding notes.

OCTABVRE is made in the USA.
